User stories Reviewer Agent:

API Header:

The image shows the Postman interface for a POST request to the endpoint `http://localhost:7860/api/v1/run/9b6f6bca-4074-49cd-96a1-21a3036534da`. The **Headers** tab is selected, displaying the following headers:

Key	Value	Description
Cache-Control	no-cache	
Postman-Token	<calculated when request is sent>	
Content-Type	application/json	
Content-Length	<calculated when request is sent>	
Host	<calculated when request is sent>	
User-Agent	PostmanRuntime/7.54.0	
Accept	*/*	
Accept-Encoding	gzip, deflate, br	
Connection	keep-alive	
Content-Type	application/json	
x-api-key	sk--fzcAJ9VUI_sbQIZlqbnMVpitL...	

The interface also shows a sidebar with collections, a top bar with search and navigation options, and a right sidebar with a chat window and a notification for Postman Cloud Agent.

API Body:

The screenshot shows the Postman interface with a POST request to `http://localhost:7860/api/v1/run/9b6f6bca-4074-49cd-96a1-21a3036534da`. The request body is a JSON object:

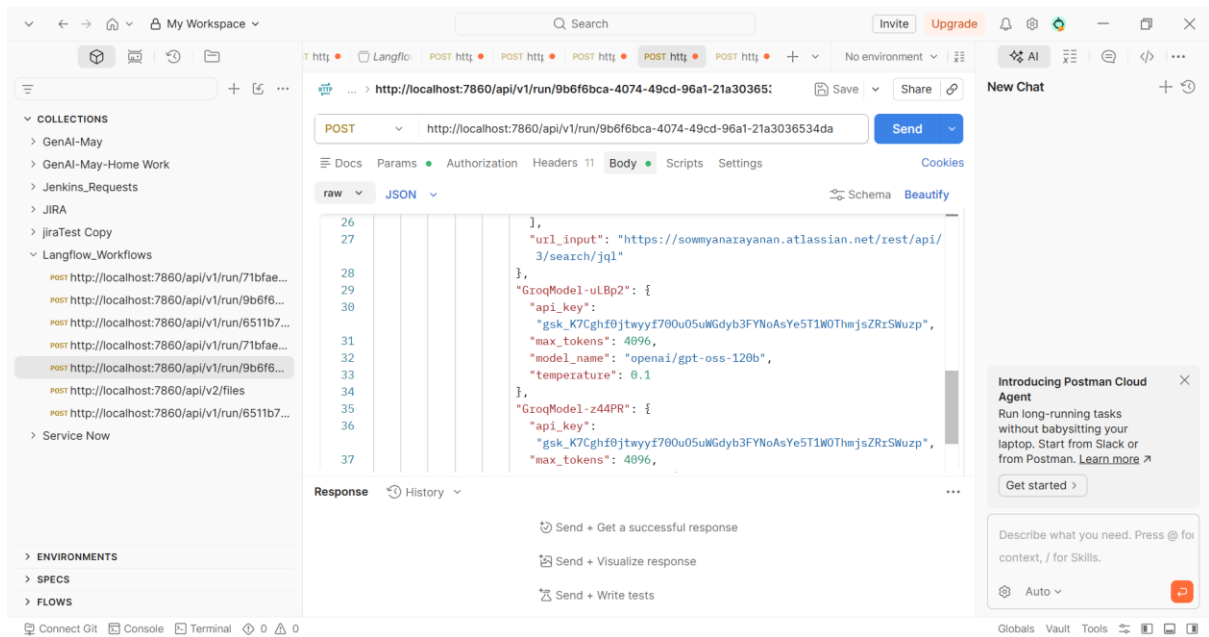

```
{  "output_type": "text",  "input_type": "text",  // "input_value": "hello world!",  "tweaks": {    "APIRequest-tmiH0": {      "body": [        {          "key": "jq1",          "value": "key = \\"US-25\\""}        ],      "key": "fields",      "value": [{"key}", "\"summary\"", "\"description\"", "\"customfield_10072\"", "\"status\"", "\"reporter\""}    ]  }
```

The interface includes a sidebar with collections, a top bar with search and navigation, and a right sidebar with a 'New Chat' section and an 'Introducing Postman Cloud Agent' announcement.

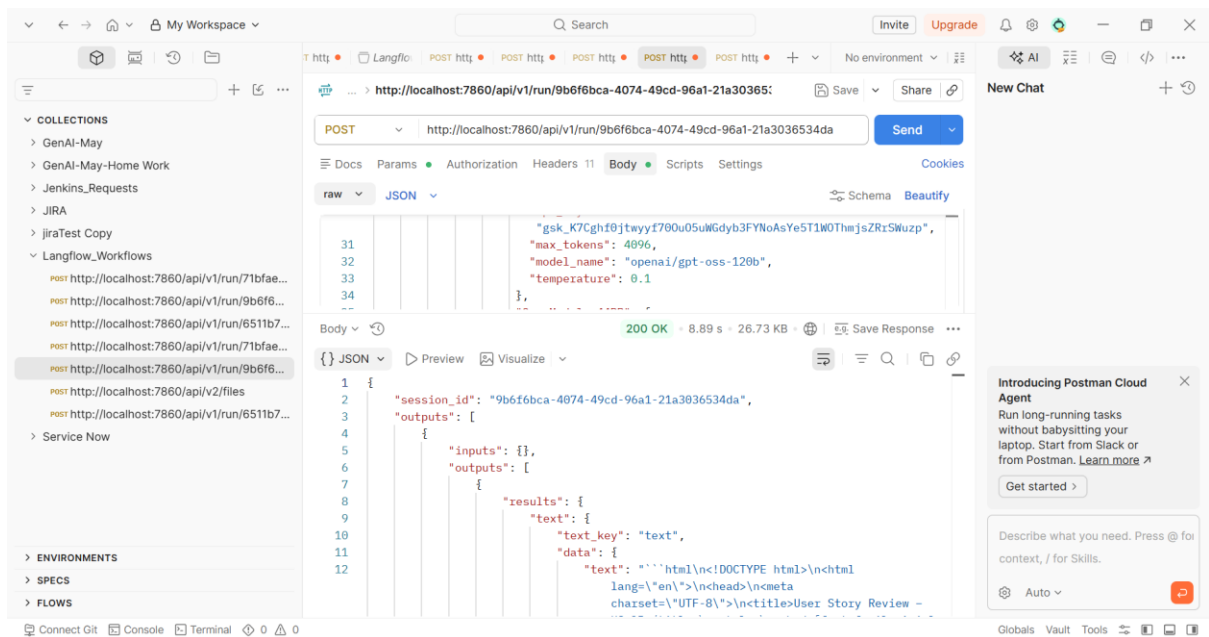

The screenshot shows the Postman interface with a POST request to `http://localhost:7860/api/v1/run/9b6f6bca-4074-49cd-96a1-21a3036534da`. The request body is a JSON object:

User Story Review – US-25

Review Summary

| Parameter                | Description                                                                                                                                                                                                           | Score (out of 20) |
|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| Clarity                  | The narrative "Employee Profile Employee Self" is ambiguous. It does not specify the actor's intent or the expected outcome. The story lacks a clear verb-noun structure and does not identify the system or context. | 8                 |
| Completeness             | There are no acceptance criteria, preconditions, or definition-of-done items. The custom field contains a generic Given/When/Then format but no concrete steps or success metrics.                                    | 6                 |
| Business Value Alignment | While employee self-service can improve operational efficiency, the story does not explain how it supports patient safety, regulatory compliance, or cost reduction in a healthcare environment.                      | 10                |
| Testability              | QA teams cannot derive meaningful test cases because the story lacks measurable outcomes, boundary conditions, and error scenarios.                                                                                   | 5                 |
| Technical Feasibility    | The story suggests a profile module but does not reference existing REST APIs, authentication mechanisms, or data privacy controls required in a regulated environment.                                               | 12                |

Overall Score

41 / 100

Improvement Summary

1. Clarify the User Story

Rewrite using the standard format:

As a role, I want action, so that benefit.

Example:

As a registered nurse, I want to view and update my own profile so that my contact information remains current for emergency notifications.

2. Define Acceptance Criteria

Ask anything

User Story Review – US-25

Review Summary

Parameter	Description	Score (out of 20)
Clarity	The narrative "Employee Profile Employee Self" is ambiguous. It does not specify the actor's intent or the expected outcome. The story lacks a clear verb-noun structure and does not identify the system or context.	8
Completeness	There are no acceptance criteria, preconditions, or definition-of-done items. The custom field contains a generic Given/When/Then format but no concrete steps or success metrics.	6
Business Value Alignment	While employee self-service can improve operational efficiency, the story does not explain how it supports patient safety, regulatory compliance, or cost reduction in a healthcare environment.	10
Testability	QA teams cannot derive meaningful test cases because the story lacks measurable outcomes, boundary conditions, and error scenarios.	5
Technical Feasibility	The story suggests a profile module but does not reference existing REST APIs, authentication mechanisms, or data privacy controls required in a regulated environment.	12

Customize the API for Pdf content Extracting working flow:

API Header:

The screenshot shows a REST client interface with a sidebar on the left listing collections and environments. The main area displays a POST request to the endpoint `http://localhost:7860/api/v1/run/6511b7be-764a-4f99-beef-1132fd909e66`. The request headers are as follows:

Key	Value	Description
Cache-Control	no-cache	
Postman-Token	<calculated when request is sent>	
Content-Type	application/json	
Content-Length	<calculated when request is sent>	
Host	<calculated when request is sent>	
User-Agent	PostmanRuntime/7.54.0	
Accept	*/*	
Accept-Encoding	gzip, deflate, br	
Connection	keep-alive	
Content-Type	application/json	
x-api-key	sk--fzcAJ9VUI_sbQIZIqbnMVpitL...	

The interface also includes tabs for Docs, Params, Authorization, Headers, Body, Scripts, and Settings. On the right, there is a 'New Chat' section with a 'Get started' button and a 'Describe what you need' prompt.

API Body:

The screenshot shows the Postman application interface. On the left, a sidebar lists 'COLLECTIONS' including 'GenAI-May', 'GenAI-May-Home Work', 'Jenkins_Requests', 'JIRA', 'jiraTest Copy', and 'Langflow_Workflows'. The main workspace displays a POST request to 'http://localhost:7860/api/v1/run/6511b7be-764a-4f99-beef-1132fd909e66'. The 'Body' tab is selected, showing a JSON payload with fields like 'output_type', 'input_type', 'input_value', 'session_id', and 'tweaks'. The 'tweaks' object contains a 'File-j5qat' with a 'path' pointing to a local PDF file. The right sidebar features a 'New Chat' section with options to save, extract, or validate runs, and an 'Introducing Postman Cloud Agent' banner.

Prompt Template:

The screenshot displays the Langflow interface, which is a visual workflow builder. On the left, a 'Components' sidebar lists various building blocks such as 'Input & Output', 'Data Sources', 'Models & Agents', 'LLM Operations', 'Files & Knowledge', 'Processing', 'Flow Control', 'Utilities', and 'Discover more components'. The main workspace shows a workflow diagram. It begins with a 'Read File' component that loads 'PF_Transfer.pdf'. This is followed by a 'Prompt Template' component where a system message is defined: 'Answer user's questions based on the document below: --- (input) Extract only Mobile Number output as Mobile No:'. The workflow then connects to a 'Groq' LLM component, which is configured with a 'Groq API Key' and the 'llama-3.1-8b-instant' model. Finally, the output is sent to a 'Text Output' component. The interface includes a search bar at the top, a 'Playground' button, and a bottom status bar showing a zoom level of 61%.
